## Getting to CrossMark

By Molly Sharp and Kevin Brandt  
Posted: March 31, 2014

This week, we launched our participation in CrossRef's CrossMark program. It's an exciting step for PLOS, and getting there was a learning experience we hope you'll find interesting.

### The Program

[CrossMark](#) is a service of [CrossRef](#) that is gaining traction among scholarly publishers, with more than 30 publishers to date, and nearly half a million scholarly documents. The purpose of the CrossMark logo appearing on article pages is to give researchers a consistent way to know the status of any article, from any participating publisher. When someone clicks the CrossMark logo from either the online version of the article, or the PDF, they see a popup like this one. It indicates that either the article is up to date, or that updates are available.

# Who? – 76 publisher sign-ups

This screenshot shows the AIP Physics of Plasmas journal website. The header includes the journal title and navigation links like Home, Browse, About, Authors, Librarians, Features, Purchase Content, Advertisers, Scitation, and AIP Journals. A search bar is visible with fields for Volume/Page, Keyword, and DOI. The main content area features a 'F1000Research' banner with navigation options: Articles, For Authors, Blog, Advisory Panel, and About/Contact. Below the banner, there's a 'CASE REPORT' section with the title 'Presentation of an umbilical cord cyst with a surprising jet: a case'. A 'CrossMark' logo and 'Version 1 of 1' are also present.

This screenshot displays the Wiley Online Library interface. The top navigation bar includes 'PUBLICATIONS | BROWSE BY SUBJECT | RESOURCES | ABOUT US'. The main content area is for the 'Journal of Organizational Behavior', showing a research article titled 'Impact of authentic leadership on organizational behavior'. The article authors listed are Hui Wang<sup>1</sup>, Yang Danni Wang<sup>4</sup>, and Y. The page includes a sidebar with 'JOURNAL TOOLS' (Get New Content Alerts, Get RSS feed, Save to My Profile, Get Sample Copy, Recommend to Your Librarian) and 'JOURNAL MENU' (Journal Home, FIND ISSUES, FIND ARTICLES, GET ACCESS, FOR CONTRIBUTORS).

This screenshot shows the 'PROCEEDINGS OF THE ROYAL SOCIETY OF BIOLOGICAL SCIENCES' website. The main article is 'High activity enables life on a high-sugar diet: blood glucose regulation in *Drosophila*', by Christian C. Voigt<sup>1</sup>. The page features a search bar, navigation links (Home, Current issue, Past issues, Submit, Subscribe, Alerts), and a sidebar with 'This Article' information (Published online before print April 13, 2011, doi: 10.1098/rspb.2011.0465) and 'Social Networking' options (facebook, twitter). The article abstract is partially visible, mentioning 'gar consumption are despite consuming vast bats are long-lived, glucose. We investigated *Drosophila* in experiments at time. Blood glucose exceeded 25 mmol l<sup>-1</sup> values ever recorded in a high-sugar diet. During normal'.

This screenshot shows the 'International Journal of Systems Science' website. The page displays the journal title, volume (46), and issue (16) for 2015. A featured article is 'Nonlinear feedback control and trajectory tracking of vehicle' by Younés Abbassi<sup>a</sup>, Youcef Alt-Amirat<sup>b</sup>, and Rachid Outbib<sup>c</sup>. The article's DOI is 10.1080/002071721.2014.880195. The page includes a sidebar with 'Browse journal' options (View all volumes and issues, Current Issue, Latest articles, Most read articles, Most cited articles, Open access articles, Submit, Subscribe, About this journal, News & offers) and a 'Preview' section with 'View full text', 'Download full text', and 'Access Options' buttons.

Fe<sub>3</sub>O<sub>4</sub> nanoparticles  
Reduced graphene  
H<sub>2</sub>O<sub>2</sub>  
NADH  
Lactate biosensor  
Simultaneous determination

Electrochemical studies revealed that the Fe<sub>3</sub>O<sub>4</sub>/r-GO/GC electrode possess excellent electrocatalytic activities toward the low potential oxidation of NADH (0.05 V vs. Ag/AgCl) as well as the catalytic reduction of O<sub>2</sub> and H<sub>2</sub>O<sub>2</sub> at reduced overpotentials. Via immobilization of lactate dehydrogenase (LDH) as a model dehydrogenase enzyme onto the Fe<sub>3</sub>O<sub>4</sub>/r-GO/GC electrode surface, the ability of modified electrode for biosensing lactate was demonstrated. In addition, using differential pulse voltammetry (DPV) to investigate the electrochemical oxidation behavior of ascorbic acid (AA), dopamine (DA) and uric acid (UA) at Fe<sub>3</sub>O<sub>4</sub>/r-GO/GC electrode, the high electrocatalytic activity of the modified electrode toward simultaneous detection of these compounds was indicated. Finally, based on the strong electrocatalytic action of Fe<sub>3</sub>O<sub>4</sub>/r-GO/GC electrode toward both oxidation and reduction of nitrite, a sensitive amperometric sensor for nitrite determination was proposed. The Fe<sub>3</sub>O<sub>4</sub>/r-GO hybrid presented here showing favorable electrochemical features may hold great promise to the development of electrochemical sensors, molecular bioelectronic devices, biosensors and biofuel cells.

# What is text and data mining?

Text Mining is an interdisciplinary field combining techniques from linguistics, computer science and statistics to build tools that can efficiently retrieve and extract information from digital text.

<http://blogs.plos.org/everyone/2013/04/17/announcing-the-plos-text-mining-collection/>

It uses powerful computers to find links

between drugs and side effects, or genes and diseases, that are hidden within the vast scientific literature. These are discoveries that a person scouring through papers one by one may never notice.

Marc Weeber and colleagues used automated text mining tools to infer that the drug thalidomide could treat several diseases it had not been associated with before. Thalidomide was taken off the market 40 years ago, but is still the subject of research because it seems to benefit leprosy patients via their immune systems. Weeber and Grietje Molema, an immunologist, used text mining tools to search the literature for papers on thalidomide and then pick out those containing concepts related to immunology. One concept, concerning thalidomide's ability to inhibit Interleukin-12 (IL-12), a chemical involved in the launch of an immune response, struck Molema as particularly interesting. A second automated search for diseases that improve when the action of IL-12 is blocked, revealed several not previously linked with thalidomide, including chronic hepatitis, myasthenia gravis and a type of gastritis.

“Type in thalidomide and you get 2-3000 hits. Type in disease and you get 40,000 hits. With automated text mining tools we only had to read 100-200 abstracts and 20 or 30 full papers. We've created hypotheses for others to follow up” says Weeber.

Weeber et al. J Am Med Inform Assoc. 2003 10 252-259

# Why?

- Researchers find it impractical to negotiate multiple bilateral agreements with hundreds of subscription-based publishers in order to authorize TDM of subscribed content.
- Subscription-based publishers find it impractical to negotiate multiple bilateral agreements with thousands of researchers and institutions in order to authorize TDM of subscribed content.
- All parties would benefit from support of standard APIs and data representations in order to enable TDM across both open access and subscription-based publishers.

# CrossRef Text and Data Mining Services

- Over 200 publishers depositing TDM information, including Elsevier and Hindawi
- 15 million DOIs enabled for the service
- Positive feedback from researchers working in this field

Thank you!
